

AI-Assisted Pancreatic Cancer Analysis Report

PancreasAI Research Lab

Patient ID:	EBE30DE8-C37	Date:	2026-07-14
Analysis ID:	ebe30de8	Time:	20:31:44
Report Type:	AI-Assisted Screening	Mode:	Clinical

PREDICTION RESULT

Pancreatic Cancer

Metric	Value
Cancer Probability	95.0%
Confidence	95.0%
Risk Level	Very High

TUMOR ANALYSIS

Parameter	Value
Tumor Area	14.04 cm ²
Estimated Volume	3.51 cc
Location	Pancreatic Tail
Stage Suggestion	Possible Stage II-III (T2-T3) — Moderate tumor
Inference Time	50.014 seconds
GPU Status	CPU Only

EVALUATION METRICS

Metric	Score
Dice Coefficient (DSC)	1.0000
Intersection over Union (IoU)	1.0000
Hausdorff Distance 95% (HD95)	0.0000
Precision	1.0000
Recall	1.0000
F1 Score	1.0000
Sensitivity	1.0000

Specificity	1.0000
Accuracy	1.0000
Avg. Surface Distance (ASD)	0.0000
Volume Similarity (VS)	1.0000

VISUALIZATION

Grad-CAM Heatmap

Segmentation Overlay

CLINICAL SUMMARY

AI-ASSISTED ANALYSIS SUMMARY

The deep learning model has identified findings consistent with pancreatic malignancy with a confidence of 95.0%. The detected lesion is located in the Pancreatic Tail region, with an estimated area of 14.04 cm² and an approximate volume of 3.51 cc.

STAGING: Possible Stage II-III (T2-T3) — Moderate tumor

RISK ASSESSMENT: Very High

The segmentation analysis reveals a focal lesion that warrants further clinical evaluation. The Grad-CAM attention map highlights the regions most influential in the model's decision.

RECOMMENDATION: Correlation with clinical history, laboratory markers (CA 19-9), and contrast-enhanced CT/MRI is strongly recommended. Referral to a hepatopancreatobiliary specialist is advised for further workup.

PHYSICIAN NOTES

DISCLAIMER: This report was generated by an AI system for research and educational purposes only. It is NOT a certified medical diagnosis. All findings must be reviewed and validated by a qualified healthcare professional before any clinical decisions are made.
